

Dear Daniel,

I believe I am the perfect candidate for this role and I am willing to do a trial period remotely for no pay to prove my skills.

I am a full stack engineer with experience working for companies as a founding engineer both in Africa and Europe.

I have a track record of completely owning a product and most of these companies are still building on my work. My product has helped companies achieve seed funding in some cases, 1000% revenue increase in others and reduced estimated MVP launch date by months recently.

I am capable of working any time zone, relocating and collaborating with others.

I look forward to hearing from you.

Kind Regards,
Olayiwola Ayoola

Sean Cook - Head of Customer, Liblab and Ex Twitter Sagiv Ofex - Owner, Liblab, Ex facebook and Amazon Frank Uwajeh (OSCP, OSWE) - CTO, Zeeh Africa, Ex CBN Aniket Sao - Coordinator, Hopstair and Sr. Director and Head of Data & Analytics in Americas

Dear Elston,

I am writing to request a chance to work as a Software Engineer at Tiny labs.

I have experience and fit in this role as I am currently working a part time role in a similar capacity at a UK startup where I am working as a Full Stack developer and the only developer capable of backend.

I am adept at Javascript, Typescript and I mostly use React JS, React Native, Node js as a default stack. I am familiar with all AWS services needed for an application built with the MERN stack.

I have owned and created MVPs which helped in acquiring funding and also others that have either increased revenue by 1000% or reduced estimated start date by months. I am able to provide references for this.

I have attached my linkedin profile for your reference.

[linkedin.com/in/olayiwola-ayoola](https://www.linkedin.com/in/olayiwola-ayoola)

layoola.info

Kind regards,
Olayiwola Ayoola

Hello Richard,

I believe I am the perfect candidate for the role as I fulfill all the requirements and have experience working with all the skills listed.

I am adept at Javascript and Typescript and have almost 5 years experience working with ReactJs, Nodejs, Expressjs, both SQL and NoSQL, Git, Linux and Docker. I have also worked with Jira and Confluence and even additional tools like React Native, Redux, Firebase, AWS amongst others.

I have built products that helped achieve a 1000% increase in revenue, reduce AWS cost by 25% and others that helped get funding. I will be glad to provide references.

I look forward to hearing from you so we can discuss these further.

Kind Regards,
Olayiwola Ayoola

Dear Frank,

I saw your post on Angellist for a software developer at Zer0paper.

I submitted an application but felt I should reach out.

I am a skilled software developer who currently would like to hold the role. I am adept at Javascript, Typescript, PHP and Python. I have worked with the MVC and MVT architecture multiple times too. I am skilled at both SQL and NoSQL.

I am used to working remotely with little or no supervision as I have worked and can provide reference from several people I've worked with.

I am working as the lead backend engineer in a part time role at <https://hopstair.com> where I am building the MVP. I have worked closely with managers and CTOs in companies like <https://tiiny.host> (Where I worked closely with the founder who is an Ex JP Morgan Developer) as the only developer who manages the product, and <https://zeeh.africa> where I worked with the CTO (OSWE and OSCP holder) as the lead developer where I built architecture, plans, teams and trained other developers. My product helped them get funding.

I would like to work on this project and I would like to discuss with you further.

I look forward to hearing from you.

Kind Regards,
Olayiwola Ayoola

Dear Morten,

I am writing to request a chance to work as a full stack engineer as Snakker. I do not mind working and not getting paid as long as I get a chance to prove my skills.

I know I am unlikely to get a chance to prove my skills based on region. This is why I have come to you with this request.

I have experience and fit in this role as I have worked in a similar capacity before and I have owned and created MVPs which helped in acquiring funding and also others that have either increased revenue by 1000% or reduced estimated start date by months. I am able to provide references for this.

I have attached my resume and also my linkedin profile for your reference.
<https://www.linkedin.com/in/olayiwola-ayoola/>

Kind regards,
Olayiwola Ayoola

Dear Dennis,

I am not a designer but I am writing to state my interest in working as a founding developer for the product.

I have experience as a founding developer and I have created over 4 MVPs. My recent MVP just helped the company land millions in funding. And the one before that increased revenue by 1000%.

I am adept at Javascript and Typescript and have almost 5 years experience working with ReactJs, Nodejs, Expressjs, both SQL and NoSQL, Git, Linux and Docker. I have also worked with Jira and Confluence and even additional tools like React Native, Redux, Firebase, AWS amongst others.

I have worked as a founding developer so, I have skills like creating database architecture, building product roadmap, building technical documentations, setting up CI/CD pipelines, working in a test driven environment and setting up scalable code structures that can be built on.

I have attached my website and also my linkedin profile for your reference.

<https://www.linkedin.com/in/olayiwola-ayoola/>

<https://layoola.info>

I look forward to hearing from you.

Kind Regards,
Olayiwola Ayoola

Dear Dmitry,

I will like to state my interest for full stack developer role at AtrOne as I believe I am the best candidate for the role. I have checked the requirements and I fit them 100%. I currently work with the same stack currently and even have some codes in my github to show.

I have experience owning products and I have worked several times as the only software developer managing an online based product. I have worked remotely across 3 continents. I work any shift.

I have worked with OSCP and OSWE certified professionals, Ex JP Morgan programmers and so on. I can provide references if needed. This is to show that I write secure, scalable and industry standard codes and I also collaborate well with others.

I am currently asking for a chance to show you how I can help move Atr.One forward. I currently work any shift and I am open to working a trial period.

I am adept at PHP, Javascript and Typescript and have almost 5 years experience working with frameworks and tools like ReactJs, Laravel, Nodejs, Expressjs, both SQL and NoSQL, Git, Linux and Docker. I have also worked with Jira and Confluence and even additional tools like React Native, Redux, PHP Unit, Jest, Firebase, AWS amongst others.

I have worked as a founding developer so, I have skills like creating database architecture, building product roadmap, building technical documentations, setting up CI/CD pipelines, working in a test driven environment and setting up scalable code structures that can be built on.

Here is a sample project, an API built with laravel
https://github.com/Layoolar/expo_laravel_phonebook_api

Here is a sample frontend project built in Nextjs

<https://wasmer-io-two.vercel.app>

I have attached my website, my resume and also my linkedin profile for your reference.
<https://linkedin.com/in/olayiwola-ayoola>
<https://layoola.info>

I look forward to hearing from you.

Kind Regards,
Olayiwola Ayoola

Dear Sam,

I would like to apply for this role as I fit all the requirements perfectly.

I am a software developer who works with Javascript and Typescript mostly.

I have worked as founding engineer for 3 companies so far, helping recruit team members later on and completely owned the products.

I would like to provide references from these companies to assure you my products did these:

Zeel Africa - After I finished the MVP 2 months before the estimated date, Zeel got seed funding from Tekedia capitals. Thanks to my product.

Readycars - Set up the team structure, database structure and architecture that they are still building on after 5 years. I helped build an app to rival Uber recently and it increased revenue by 1000%.

Hopstair - While this is a part time role, my addition to the team for 10 hrs a week reduced the estimated delivery date.

I am also adept at AWS, React Native, Containerization, Firebase etc.

I have built products end to end, set up engineering team at 2 companies so, I have skills like creating database architecture, building product roadmap, building technical documentations, building a team, setting up CI/CD pipelines, working in a test driven environment and setting up scalable code structures that can be built on.

I have attached my website and also my linkedin profile for your reference.

<https://www.linkedin.com/in/olayiwola-ayoola/>

<https://layoola.info>

I look forward to hearing from you.

Kind Regards,
Olayiwola Ayoola

Hello Adam,

I will like to offer my services as a software developer as I am looking for a role to learn and to keep busy. I also believe I can get my chance to impress and maybe get noticed.

I have checked the stack and it aligns with my experience and skills.

I would appreciate if you can give me an opportunity to work at your company as a volunteer.

I look forward to hearing from you.

Kind regards,
Olayiwola Ayoola

Dear Leonie,

I am writing to apply for this role as I believe I am the perfect person for the role. I am a full stack developer who currently works with the exact same stack (React, React Native and PHP) in my current 10 hrs/week role.

I am adept at PHP, Javascript and Typescript and I am skilled and have almost 5 years experience in Laravel, PostgreSQL, MongoDB, ReactJs, Firebase, AWS, GCP amongst others.

I work in a test driven development environment and I am adept at Cypress, Selenium, PHPUnit, Mocha amongst others.

Below are sample links to my project. One for laravel built to work with React and another for a react project.

https://github.com/Layoolar/expo_laravel_phonebook_api

<https://github.com/Layoolar/homellc>

I have built products that helped achieve a 1000% increase in revenue, reduce AWS cost by 25% and others that helped get funding. I will be glad to provide references.

I have worked as a founding developer so, I have skills like creating database architecture, building product roadmap, building technical documentations, setting up CI/CD pipelines, working in a test driven environment and setting up scalable code structures that can be built on.

Dear David,

I am writing to apply for this role as I believe I am the perfect person for the role. I am a full stack developer who has a lot of experience and have built over 3 MVPs, one of which got funding, another increased revenue by 1000%, and another is currently bootstrapped. I can provide references for these.

I am adept at Javascript, Typescript, PHP, Python, Java, and C(I have codes to prove these on my github). And I can hold my ground in several other languages.

I am skilled at bash scripting and Linux usage and have almost 5 years of experience in React, Laravel, React Native, Node, AWS, GCP, MySQL, No SQL databases amongst others.

I take initiative and have owned projects from end to end. Both single-handedly and in groups. I am a problem solver and I am skilled in solving issues with codes(I can show my level 4 codewars).

As I have worked as the product engineer for a hosting company (tiiny.host), I am familiar with several AWS services like EC2, Edge, CloudFront, Batch, S3, RDS, and even DynamoDB amongst others.

I have built products that helped achieve a 1000% increase in revenue, reduce AWS cost by 25%, and others that helped get funding. I will be glad to provide references.

I have worked as a founding developer so, I have skills like creating database architecture, building product roadmaps, building technical documentation, setting up CI/CD pipelines, working in a test-driven environment, and setting up scalable code structures that can be built on.

I have attached my website and also my LinkedIn profile for your reference.

Olayiwola Ayoola

Kind Regards,
Olayiwola Ayoola

Hello Antoine,

I am writing a request to work on this project as this project is a project I am able to show my skills. I am currently working as a founding developer for a company where I use these exact same stack. Node.js, React, Typescript, Firebase.

I am also going to be very good in this role because of my experience working as the founding developer at a startup which was building an open banking API. I not only built services to facilitate payment, I also built services to retrieve credit statements, customer information for our client.

I am adept at Javascript, Typescript, PHP, Python and C. However, I mostly work with Typescript and Javascript. I work any timezone, either remotely and I am willing to relocate to any country if need be.

I really would like to be considered for this role as I see this role as one where I can maximize and demonstrate my abilities while developing new ones.

I have worked and developed alongside great people including an OSCP and OSWE certified cybersecurity expert who helped me improve on app security. I am willing to provide references.

I have worked as a founding developer so, I have skills like creating database architecture, building product roadmap, building technical documentations, setting up CI/CD pipelines, working in a test driven environment and setting up scalable code structures that can be built on.

I would like it if I get a chance to discuss this with you further.

I look forward to hearing from you.

Kind Regards,
Olayiwola Ayoola

Sante

Dear Jun,

I am writing to apply for this role as I believe I am the perfect person for the role. I am a backend developer who currently works with Nodejs(Typescript).

I have worked as a product owner completely building things from the ground up. These include <https://zeeh.africa> where I worked with a OSCP and OSWE certified cybersecurity professional to build a safe and secure app from ground up (A product that just got millions in seed funding).

I am adept at Java and Typescript and I am skilled and have almost 5 years experience in Node, AWS, GCP amongst others.

I have built products that helped achieve a 1000% increase in revenue, reduce AWS cost by 25% and others that helped get funding. I will be glad to provide references.

I have worked as a founding developer so, I have skills like creating database architecture, building product roadmap, building technical documentations, setting up CI/CD pipelines, working in a test driven environment and setting up scalable code structures that can be built on.

I have attached my website and also my linkedin profile for your reference.

<https://layoola.info>

I look forward to hearing from you.

Kind Regards,
Olayiwola Ayoola

Hi Joe,

I am applying for this role because I am very confident in my skills and I need the opportunity to be able to prove them.

I am a developer who currently works with the exact same stack (Nodejs, MongoDB and AWS) in my current 10 hrs/week role. I have worked in AWS intensive roles. For example, I was

contracted to build features that allows you to host a website by uploading a zip file or pdf at Tiiny Host which is owned by an ex JP Morgan employee.

I am adept at Javascript and Typescript and I am skilled and have 5 years experience in Node, Express, Mongo, AWS, GCP amongst others. I work any time zone

I have built products that helped achieve a 1000% increase in revenue, reduce AWS cost by 25% and others that helped get millions in funding. I will be glad to provide references.

I have worked as a founding developer so, I have skills like creating database architecture, building product roadmap, building technical documentations, setting up CI/CD pipelines, working in a test driven environment and setting up scalable code structures that can be built on.

<https://layoola.info>

I look forward to hearing from you.

Kind Regards,
Olayiwola Ayoola

Hello Christina,

I would like to apply for this role as I meet all the requirements.

I have helped build over 3 MVPs, 2 of which I laid the foundation and later trained developers to scale. These are some MVPs I've built.

- An open banking API just landed a seed funding after being completed 2 months ahead of schedule (I started the MVP and later trained 5 junior developers who built it with me). -

<https://zeeh.africa>

- A ride hailing app for a local car hiring company to rival Uber and Bolt (Increased the company's revenue by 1000%) -(I built this fully end to end) - <https://readycars.ng>

-A mental health and confidence boosting mobile application for a UK startup which is now close to achieving funding. - <https://hopstair.com>

- A product that allows you to host websites simply by dragging/uploading a zip file for a hosting company who is now fully bootstrapped and pays for itself. -- <https://tiiny.host>

I have worked with an OSWE and OSCP cybersecurity expert (CTO Zeeh Africa), An ex JP Morgan developer amongst many others.

I have worked as a founding developer so, I have skills like creating database architecture, building product roadmap, building technical documentations, setting up CI/CD pipelines, working in a test driven environment and setting up scalable code structures that can be built on.

I have attached my website and my linkedin profile for your reference.

Dear Ranjith,

I am writing in respect of the [Backend Node Developer Role](#) at Ratham.

I have reached out to you directly because as much as I am very confident in my skills, I need the opportunity to be able to prove them.

I am a developer who currently works with the exact same stack (Nodejs, MongoDB and AWS) in my current 10 hrs/week role. I have worked in AWS intensive roles. For example, **I was contracted to build features that allows you to host a website by uploading a zip file or pdf at [Tiiny Host](#) which is owned by an ex JP Morgan employee.**

I am adept at **Javascript and Typescript** and I am skilled and have 5 years experience in **Node, Express, Mongo, AWS, GCP** amongst others. **I can temporarily fill in for frontend and technical support roles if there is an emergency as I have experience in these roles too. I work any time zone**

I have built products that helped achieve a **1000% increase in revenue, reduce AWS cost by 25%** and others that helped **get millions in funding**. I will be glad to provide references.

I have worked as a founding developer so, I have skills like **creating database architecture, building product roadmap, building technical documentations, setting up CI/CD pipelines, working in a test driven environment and setting up scalable code structures that can be built on.**

I have attached my website, my resume and also my linkedin profile for your reference.

<https://www.linkedin.com/in/olayiwola-ayoola/>

Dear Nathália,

I am writing to apply for this role as I believe I am the perfect person for the role. I am a full stack developer who fulfills all the requirements of the role.

I am adept at Javascript and Typescript, PHP and Python and I am skilled and have almost 5 years experience in ReactJs, React Native, NodeJs, SQL and NoSQL databases amongst others.

I have worked as founding developers and have been key member in building 3 MVPs. I have built products that helped achieve a 1000% increase in revenue, reduce AWS cost by 25% and others that helped get funding. I will be glad to provide references.

I have worked as a founding developer so, I have skills like creating database architecture, building product roadmap, building technical documentations, setting up CI/CD pipelines, working in a test driven environment and setting up scalable code structures that can be built on.

I look forward to hearing from you.

Kind Regards,
Olayiwola Ayoola

Dear Ephraim,

I am writing to request the role of senior software developer. I have decided to reach out directly because my application might end up being overlooked because of my region. I do not mind working a trial period to prove my skills.

I am interested in the role and I believe I am a perfect fit for this position. I have experience as a founding software developer and most times complete ownerships of products.

My product has helped companies achieve a 1000% revenue increase, in another case, land seed investment(MVP) and also reduced estimated release date by 2 months in another.

I work with Javascript and Typescript and prefer using React, React Native and NodeJS if possible.

I have attached my resume and link to my linkedin profile for your reference.

Kind regards,
Olayiwola Ayoola

Dear Tom,

I am writing to request a chance to work as a React Native Developer at Amari Pax.

I have experience and fit in this role as I am currently working a part time role in a similar capacity at a UK startup where I am working as a Full Stack developer and the only developer capable of backend.

I have owned and created MVPs which helped in acquiring funding and also others that have either increased revenue by 1000% or reduced estimated start date by months. I am able to provide references for this.

I have attached my linkedin profile for your reference.

<https://www.linkedin.com/in/olayiwola-ayoola/>

<https://layoola.info>

Kind regards,
Olayiwola Ayoola

Dear Hiring Manager,

I am writing to request a chance to work as a Software Developer at Story Spread.

I have experience and fit in this role as I am currently working a part time role in a similar capacity at a UK startup where I am working as a Full Stack developer and the only developer capable of backend.

I am adept at Javascript, Typescript, PHP and Python and I mostly use React JS, React Native, Laravel as a default stack

I have owned and created MVPs which helped in acquiring funding and also others that have either increased revenue by 1000% or reduced estimated start date by months. I am able to provide references for this.

I have attached my linkedin profile for your reference.

<https://www.linkedin.com/in/olayiwola-ayoola/>

<https://layoola.info>

Kind regards,
Olayiwola Ayoola

Dear Lyndsay,

I am writing to apply for the prompt engineer role.

I am a software developer who adopted GPT from the first week. Since then, I have built several applications with the help of ChatGPT. I have even built an enterprise Java application with Chat GPT and without my own personal input. I am happy to show the repository.

As a software developer, I have worked with open AIs models and have a deeper understanding.

I look forward to hearing from you.

Kind Regards,
Olayiwola Ayoola

Dear Bastien,

I am writing to apply for this role as I believe I am the perfect person for the role. I am a full stack developer who currently works with the exact same stack (React with Typescript, Nodejs and PostgreSQL) and the only backend capable developer on the team.

I am adept at Javascript and Typescript and I am skilled and have almost 5 years experience using Nodejs, AWS amongst others. I might not have worked in the large companies but I am good at what I do and I give my best to whatever I do and I believe I deserve a chance to prove it.

I have built products that helped achieve a 1000% increase in revenue, reduce AWS cost by 25% and others that helped get funding. I will be glad to provide references.

I have worked as a founding developer so, I have skills like creating database architecture, building product roadmap, building technical documentations, setting up CI/CD pipelines, working in a test driven environment and setting up scalable code structures that can be built on.

I look forward to hearing from you.

Kind Regards,
Olayiwola Ayoola

I am Olayiwola Ayoola, a full stack developer with over 5 years experience. I am adept at multiple languages but mostly use Javascript and Typescript. I have used Javascript frameworks like React, Next, Express, Nest and have experience building secure websites and RESTful applications.

I have worked with both SQL, NoSQL and other databases including MongoDB, FireStore, PostgreSQL, DynamoDB amongst others.

As I have worked on building 3 MVPs, I have experience with things like database architecture, technical documentations, team and product architecture amongst others.

As I have worked as the sole maintainer at a hosting company, I have also worked with hosting services like AWS.

I have strong problem skills and learn new technologies quickly. As evidence, I am highly rated on codewars and also have a multilanguage badge on github.

I have worked along side several people who helped improve my skills over the years. People like the Uwajeh Frank, the CTO of Zeeh Africa, a cyber Security expert who has OSCP and OSWE certifications, Elston Barreto, owner of tiiny.host, an ex JP Morgan programmer, Sagiv Ofek, owner of Liblab, ex facebook and Amazon, Sean Cook, Head of customer at Liblab and ex twitter amongst others.

Dear Haron,

I am a full stack engineer that will love to work with you. I do not mind a voluntary role. As long as I can learn. I am adept at Javascript and Typescript amongst others and looking to show my skills on an international level.

<https://layoola.info>

I look forward to hearing from you

Dear Pat,

I am applying for this role as I believe I am the perfect candidate for this role.

I have a track history of working as a support agent and I have supported some of the biggest SaaS products. I have supported Jive, GFI faxmaker amongst others.

As a software developer who has built and worked with existing APIs using languages like Javascript and PHP, I will be able to help the customers better and if needed, do basic troubleshooting on my part thereby reducing the workload of the tech team. I will also be able to explain issues in a way the tech team will find it easier to understand.

I would like to discuss this further.

I look forward to hearing from you.

Kind Regards,
Olayiwola Ayoola

Dear Brian,

I am applying for this role as I believe with my experience in this role, I am the best candidate.

I am a software engineer who has worked as a technical support for some of the biggest SaaS products in the world. I have supported the likes of JiveSoftware.

In my former role, I needed to study and become a product expert in 40 hours. I did this with over 5 products and topped metrics.

My technical background helps me understand products easily while my communication skills, empathy and calmness helps me relate well with customers.

I will like to discuss this further over a call and show you how I can contribute to your company.

I have attached my website and linkedin links for your reference.

<https://layoola.info>

Dear Natalia,

I am applying for this role as I believe with my experience in this role, I am the best candidate.

I am a technical support and software engineer who has worked for some of the biggest SaaS products in the world. I have supported the likes of JiveSoftware.

In my former role, I needed to study and become a product expert in 40 hours. I did this with over 5 products and topped metrics. I closed all tickets within 30 minutes and achieved 80% FCR and 95% FTAR using Zendesk and collaborated with Jira. I tested endpoints with curl on my linux terminal and postman on my virtual machine.

My technical background helps me understand products easily while my communication skills, empathy and calmness helps me relate well with customers. I am certified C2 in English by an English examination board.

I will like to discuss this further over a call and show you how I can contribute to your company.

I look forward to hearing from you.

Kind Regards,
Olayiwola Ayoola

I have worked as a full stack developer for 4 companies and have built over 5 MVPs both web and mobile. These products have helped increase revenue and also land funding in other cases. I am adept at Typescript, Javascript, PHP and Python. I work with both SQL and NoSQL databases.

Dear Pedro,

I am writing to request a chance to intern as a full stack engineer at Thorwallet. I do not mind working and not getting paid as long as I get a chance to prove my skills and learn blockchain technology.

I am a full stack developer with many years of experience, adept at Javascript, Typescript, PHP and Java.

I have owned and created MVPs which helped in acquiring funding and also others that have either increased revenue by 1000% or reduced estimated start date by months. I am able to provide references for this.

I have worked as a founding developer so, I have skills like creating database architecture, building product roadmap, building technical documentations, setting up CI/CD pipelines, working in a test driven environment and setting up scalable code structures that can be built on.

I have attached my website, resume and also my linkedin profile for your reference.

<https://www.linkedin.com/in/olayiwola-ayoola/>

Kind regards,
Olayiwola Ayoola

Dear Noy,

I am reaching out directly to request the opportunity to join LivePerson as a full stack developer. I fill all the requirements and I believe I am the kind of talent you are looking to acquire.

I have attached a link to my personal website.

<https://layoola.info>

Thanks

Dear Noy,

I am reaching out directly to request the opportunity to join LivePerson as a full stack developer. I fill all the requirements and I believe I am the kind of talent you are looking to acquire.

I am a full stack developer who currently works with the exact same stack (React with Typescript, Nodejs) and the only backend capable developer on the team.

I am adept at Javascript and Typescript and I am skilled and have almost 5 years experience using Nodejs, MongoDB, AWS amongst others. I am good at what I do and I give my best to whatever I do and I believe I deserve a chance to prove it.

I have built products that helped achieve a 1000% increase in revenue, reduce AWS cost by 25% and others that helped get funding. I will be glad to provide references.

I have worked as a founding developer so, I have skills like creating database architecture, building product roadmap, building technical documentations, setting up CI/CD pipelines, working in a test driven environment and setting up scalable code structures that can be built on.

I look forward to hearing from you.

Kind Regards,
Olayiwola Ayoola

I have attached my resume and links to my linkedin and personal website.

<https://www.linkedin.com/in/olayiwola-ayoola/>

<https://layoola.info>

Thanks

Dear Faisal,

I am reaching out directly to request the opportunity to join Slide as a full stack developer. I fill all the requirements and I believe I am the kind of talent that could bring new ideas and orientation to the team. I like the project and I do not mind not getting paid. I am looking to prove myself internationally.

I am a full stack developer who currently works with the exact same stack (React with Nodejs) and the only backend capable developer on the team.

I am adept at Javascript and Typescript and I am skilled and have almost 5 years experience using Nodejs, MongoDB, AWS amongst others. I am good at what I do and I give my best to whatever I do and I believe I deserve a chance to prove it.

I have built products that helped achieve a 1000% increase in revenue, reduce AWS cost by 25% and others that helped get funding. I will be glad to provide references.

I have worked as a founding developer so, I have skills like creating database architecture, building product roadmap, building technical documentations, setting up CI/CD pipelines, working in a test driven environment and setting up scalable code structures that can be built on.

I have attached my resume and links to my linkedin and personal website.

<https://www.linkedin.com/in/olayiwola-ayoola/>

<https://layoola.info>

Thanks

Hello Dmitry,

I am writing in respect of the open [software engineering intern role](#).

I believe I am the perfect candidate for this role as I have prior experience and learn things superfast. I would like to cover this role. I do not mind not getting paid. I have come directly to you to increase my chances of being given a chance.

I work as a volunteer at [Hopstair UK](#). I am willing to bring a reference letter. This is evidence that I genuinely want to learn.

I am adept at 5 programming languages including Javascript, Typescript and Python. I have worked remotely in an Agile, fast paced and test driven environment.

I would like to discuss this further with you.

I look forward to hearing from you.

Kind Regards,
Olayiwola Ayoola

I have always worked with fast developing startups. I thrive in fast paced, fast developing small teams. I believe in these kinds of teams I learn a lot.

Having achieving great feats in several startups in my home company, I have built several products which helped secure millions in funding, or increase revenue by 1000%.

I find Aryeo to be fast growing and an opportunity to exhibit my existing skills while developing new ones.

One of my proudest projects was the open banking API I built at Zeeh Africa. Having written the first line of code, I trained and worked with some junior developers to rewrite over 15 mobile applications written in several languages and frameworks into one API written in Typescript. The product just secured millions in funding after being completed ahead of schedule.

Dear Nikolai,

I am writing to apply for this role as I believe I am the perfect candidate. I have worked intensively with all your stacks which I can show with proof.

I have worked with AWS, NodeJS, React, React Native for over 5 years and I have worked with Java which is similar to Swift.

I have worked on AWS and Node on a higher level as I worked for an ex JP Morgan developer at tiiny.host where I built functions that lets you host your website simply by uploading a zip file.

I worked a lot with AWS services like S3, EC2, Cloudfront and I have used Node, React and React Native for several years.

I would be happy to work as a full stack. Frontend, Backend, or General Mobile Application. I am an excellent programmer and I have references to show for it.

I have built products that helped achieve a 1000% increase in revenue, reduce AWS cost by 25% and others that helped get funding. I will be glad to provide references.

I have worked as a founding developer so, I have skills like creating database architecture, building product roadmap, building technical documentations, setting up CI/CD pipelines, working in a test driven environment and setting up scalable code structures that can be built on.

I have attached my website and also my linkedin profile for your reference.

<https://layoola.info>

I look forward to hearing from you.

Kind Regards,
Olayiwola Ayoola

Hi Brandon,

I am not sure if you are interested in anything outside the metaverse.

However I do have a startup Idea that could redefine how groceries orders are made throughout the world.

It would also make us in control of the grocery market as a middleman for the grocery market and any niche would be ours

I am currently looking for pre seed investment while being careful not to give out my idea as it is a very good one that can be taken.

If you'd like to be our angel Investor, I'll like to discuss further with you.

I have attached my website for your reference

<https://layoola.info>

Kind Regards,
Olayiwola Ayoola

<https://bitfinex.recruitee.com/o/remote-mobile-engineer-react-native-es-madrid/c/new>

Having gathered experience locally and internationally at startups, I have equipped and sharpened my skills and I now believe I am set to prove myself on a larger scale while learning new things.

Bitfinex is a top company that is recognized far and wide and also an equal opportunity hire employer. For this reason, I believe the team is filled with top talents all around the world which I will be proud to work with. I believe I will grow at a very fast pace and also learn new things while working at Bitfinex.

As an employer, Bitfinex has good reviews on places like Glassdoor which means Bitfinex provides an opportunity for its workers to actually grow.

I would like to be a part of these.

Technical Competence

Problem-Solving Abilities: Problem-solving is a fundamental skill for developers. A programmer should have the ability to analyze complex problems, break them down into smaller, manageable components, and devise effective solutions.

Continuous Learning and Adaptability: developers must keep up with the latest advancements. A commitment to continuous learning is crucial for staying relevant and acquiring new skills.

Dear Hiring Manager,

I would like to show my interest in this role as I think I will excel in this role. I currently work as the lead developer at Hopstair who is building a mobile application for self motivation.

I will also be very good in this role because of my experience working as the founding developer at a startup building who built an app to rival Uber and my product increase the revenue by 1000%.

I am adept at Javascript and Typescript amongst others. I work at any time zone, either remotely and I am willing to relocate to any country if need be.

I really would like to be considered for this role as I see this role as one where I can maximize and demonstrate my abilities while developing new ones.

I have worked and developed alongside great people including an OSCP and OSWE certified cybersecurity expert who helped me improve on app security. I am willing to provide references.

I have worked as a founding developer, so I have skills like creating database architecture, building product roadmaps, building technical documentation, setting up CI/CD pipelines, working in a test-driven environment, and setting up scalable code structures that can be built on.

I have attached a link to my personal portfolio website below for your reference.

<https://layoola.info>

I would like it if I get a chance to discuss this with you further.

I look forward to hearing from you.

Kind Regards,
Olayiwola Ayoola

Hello Anna,

I'm sorry for disturbing you and it's totally fine if you don't respond. I am just very heartbroken and I think I have been treated in an unfair way. I reached out to my recruiter and got no reply so I'm just trying my luck. At least to get closure.

How can I fail a process that is static? Is it possible to reach the last "Manager Technical Interview" and your resume is suddenly "not aligned with the role requirements?".

I applied for the Support Agent Role and I passed all the tests excellently. Both CCAT and Questionnaire. I was invited to schedule an interview and on that day, my recruiter didn't show up.

After awaiting a reschedule link or an email for a few days and nothing came, I reached out to the mail that sent me a schedule to send a reschedule link. My mail was not replied. After a few mails over like 2 weeks (I was following up because the job was important to me and I was sure I would get it), I got a response that said "Hello! When works for you?". There was no link. I replied that I was available anytime. I had to send a few messages over weeks again, no response until the day I reached out to you.

I was already feeling I was not wanted or liked (Definitely not my skills or assessments).

I picked a new meeting date and the call lasted like 5 minutes. I was expecting questions.

Nothing came!!! The only questions I got was:

Are you okay working with your tools?

Are you okay with the salary?

Are you okay working a full remote job?

That was all I got. Of course, I replied that I was okay with those as I have experience working with similar rules and terms.

I was told I would have a 1 hour technical interview with a Manager. Also told me a bit about the company (They can refund up to certain amounts on tools e.t.c). That was all..

I was happy and was so sure I got the role as I do not see myself failing a technical interview. I was anxiously waiting for the next mail.

Only to get an email that said something like "I did not meet the job requirements closely".

My resume was reviewed before the tests. What changed? How do you fail an interview that lasted less than 5 minutes and had about 3 questions?

I just feel this decision was sentimental and I think I at least deserve closure if it wasn't.

Sorry for the long message. I am just really heartbroken.

Bitcoiners Africa is a fast-growing community in Africa that is geared towards technological, financial, and general advancement. Working for such a community has always been my dream. I believe I would learn new skills and grow with the community.

The crypto age is arguably the next evolution humans are gearing towards. Strategically positioning myself and becoming a professional early will make me be able to build and help advance Africa and the world when the world finally moves to that age.
